1. Introduction

1.1. Purpose

This document is the Release Notes for the Bombardier* Release of TCNOpen* TRDP* Version as implementation of the communication profile defined in IEC61375-2-3.

1.2. Intended Audience

The audience of this document and the users of the release are software engineers that want to adapt or to use TCNOpen* TRDP* as implementation of the communication profile defined in IEC61375-2-3.

1.3. References/Related Documents

1.4. Abbreviations and Definitions

Abbreviation	Definition
PD	"Process Data" Part of the in [Wire] defined communication protocol used for cyclic data transmissions based on UDP protocol.
UDP-MD	"UDP Message Data" Part of the in [Wire] defined communication protocol used for event driven data transmissions based on UDP protocol.
TCP-MD	"UDP Message Data" Part of the in [Wire] defined communication protocol used for event driven data transmissions based on TCP protocol.
ETBN	Ethernet Train Backbone Node

Table 2: Abbreviations and Definitions

2. Product Definition

2.1. General Description

The TCNOpen TRDP is an open source implementation of communication profile described in [Wire] and includes compiled libraries for primary targets and source code to be used for other platforms as well as examples for reference implementation.

TCNOpen TRDP includes:

- TRDPLight (the communication protocol stack for PD, UDP-MD and TCP-MD)
- TRDP Marshall – a service for marshalling/unmarshalling TRDP user data
- TRDP XML – a service for reading TCNOpen TRDP XML configuration files
- TRDP SPY – a wireshark plugin to interpret TRDP telegrams

It does not yet include:

- TRDP LADDER – ladder support acc. to IEC61375-3-4
- TRDP TTI – a service to access the train topology information data base of the ETBN
- TRDP SDT – a service for safe data transmission according to the definition in [Wire]
- TRDP ADR – a service for IP-URI address translation
- TRDP SDL – a service for SW download support

2.2. License Agreements

The TRDP Source Code (except the TRDPSPy source code) is subject to the terms of the Mozilla Public License, v. 2.0.

If a copy of the MPL was not distributed with this document, You can obtain one at <http://mozilla.org/MPL/2.0/>.

The TRDPSPy Source Code Form is subject to the terms of the GPL.

2.3. Product Identification

TCNOpen TRDP contains the following parts:

Abbreviation	Identification	Remark
TRDPLight		Win32 and Posix
TRDPMarshall		Win32 and Posix
TRDPXML		Win32
TRDPSPy		Win32 and Linux
TRDPLadder		
TRDPADR		
TRDPTTI		
TRDPSDL

2.4. Targets

2.4.1. Primary Targets

TCNOpen TRDP is provided for a set of primary targets. Outputs for these have been verified during the release process.

Target	Use	OS	CPU-HW
Linux PC	General	Linux 32	x86
Windows PC	General	Windows XP	x86
MAC	General	MacOS	x86

Table 4: Primary Targets

2.4.2. Secondary Targets

TCNOpen TRDP is also delivered as an SDK with source code and example makefiles only. The makefiles serve as examples for building the binaries for different platforms and can be used as a template for specific platform builds. The following table shows the builds which have not been tested but have been taken care of within the source code.

Target	Use	OS	CPU-HW
Windows PC	General	Windows7 32	x86

3.2.5. Resources

The following open source resources are needed for the below described functionality of the TRDP library are included in the delivery.

File	Description
..\resources\windows\getopt*	Windows getopt implementation for testing
..\resources\windows\iconv*	Iconv for XML configuration interpretation
..\resources\windows\libxml*	Libxml for XML configuration interpretation
..\resources\windows\pthread*	Posix thread implementation for Windows for VOS
..\resources\windows\wireshark*	Wireshark 1.8.3 for TRDP Spy

3.2.6. Build Environment

The following files for the build environment are included in the delivery.

File	Description
..\makefile	Makefile for TRDP Light
..\readme-makefile.txt	Makefile configuration instruction
..\config\ buildsettings_posix_TEMPLATE	Makefile configuration settings
..\VisualC*	VisualC 2010 configuration files to build the TRDP library as well as the different test applications.
..\Xcode*	XCode configuration files to build the TRDP library as well as the different test applications.

3.4. Restrictions

None

4. Installation

4.1. Platform

This version does not contain ready made libraries or DLL (except for TRDP SPY) but only the SDK including the build environment configurations.

4.2. SDK

1. Unpack the file “TCNOpenTRDP x.x.x.x0.zip” into your development work area.
2. Check the files in src/vos for targets which suites your target
3. Edit the Makefile by adding or changing your configuration.
4. For windows environments, open the VisualC/Win32TRDP_VS2010.sln file with MS Visual Studio 2010.

.
All source files/libraries/executables can be found in the folders described in chapter 3.2.

5. How to use

5.1. Linux

Adapt the delivered configuration for the makefile and compile the TRDP library.

5.2. VxWorks

Not yet supported.

5.3. Windows

Adapt and use the delivered VisualC 2010 configuration and compile the TRDP library.

6. Changes

The following CR's (Problem Report) and NCR's (Non Conformity Reports) have been corrected since the previous release. Column 'CR.' contains the PR number, if a PR exists.

6.1. TRDPLight

6.1.1. Corrected Errors

CR	Description
#109	vos_getInterfaces for WIN32 does not read subnet masks
#125	After TRDP rev. 891, if own IP address != 0; Subscriber becomes not able to register the socket descriptor which is created in tlp_subscribe() by the Subscriber. After that, Subscriber can not receive PD packet any more.
#126	The TCP reception is not handling properly (WSA)ECONNRESET.
#130	Although the maximum length of PDDATA is 1432 octets in the specification, a PD packet with 1436 octets of PDDATASET is allowed to be sent.
#132	The statistic information gotten with tlc_getPubStatistics() is not for publisher but for subscriber.
#133	Subscriber performs Join multicast. When numJoin is obtained in tlc_getStatistics(), the value is always 0.
#134	While sending PD packet is performed repeatedly in Linux, when the clock time is turned back, sending PD packet is stopped. After that, when the clock time is set forward than the previous time not altered, sending PD packets is restarted.
#135	Although Publisher sends PD packets, the value of numSend obtained in tlc_getPubStatistics() is always 0.

Table 20: Corrected Errors TRDPLight

6.1.2. New or Enhanced Functions

CR	Description
#25	vos_shared_mem.c - WIN32 implementation missing
#29	vos_thread.c semaphore implementation missing
#57	vos_thread.c mailbox implementation

Table 21: New or enhanced functions TRDPLight

6.1.3. Known Errors

CR	Description
----	-------------

CR	Description
#30	For performance reasons a un-join shall be done after unsubscribing.
#37	When sending MD request to unicast address TRDP stack assumes that only one reply may be received. This may not be sufficient when using functional addressing.
#131	In the case that an End Device receives MD packet in multicast with dual interfaces for two Ethernet sub-networks but one of the cables (for sub-network #2) is removed, the statistics data gotten from the sub-network #2 by the appHandle in tlc_getStatistics() shows the same value as that from the sub-network #1. In this case, since no packet is received at the sub-network #2, the statistics data shall not be counted up.

Table 22: Known Errors TRDPLight

6.1.4. Compatibility to Earlier Releases

Compatible to earlier releases.

6.2. TRDPMarshall

6.2.1. Corrected Errors

CR	Description
#137	The size of Dataset obtained with tau_calcDatasetSizeByComId() is wrong.
#138	The size of Dataset unmarshlled with tau_unmarshall() does not return to the same size as before marshalling.
#139	A part of Dataset is missing after marshalling with tau_marshall().
